

Abstract

This invention relates to a kind of non-powered
5 environment-protective sightseeing carriage for pets, which
comprises compartment and wheels. The compartment includes floor,
side boards and top cover. Vessels for food and water are provided
in the compartment. There is a hole on the floor with a dropping tray
under it. At least one side of side boards (12) is transparent. This
10 invention satisfies the need to take pets out for looking around with
enjoyment. In addition, it has advantages that pets may relieve
themselves inside the carriage so that have no effect on public
sanitation and on other's health while pets have a comfortable space
for their activities.
